CLEANING

LIMPIEZA

For optimal maintenance of Arklam Countertops, regular cleaning with a **rag moistened with soap and water** is recommended. In addition, it is advisable to clean stains as soon as they are produced and not to let them dry out. If the stain is not recent and has become embedded, warm soapy water should be applied for a few minutes to soften the dirt and then removed with a damp rag.

As for the material used to remove the stains, we recommend **soft rags and blue anti-scratch pads**. The more respectful the material used for cleaning, the better the maintenance of the worktop.

Abrasive products or bleach should be avoided at all times. If the latter is used, it should be lowered with water and not left to act on the Arklam surface for a long time. It is important to pay special attention to the polished finish as it is more sensitive to abrasive products than other finishes.

Although Arklam's sintered mass is fire and heat resistant, whenever possible, a **protector should be used to support hot pots or pans**. It is also important to use cutting boards to avoid cuts and knocks on the worktop as much as possible, especially when using ceramic knives and instruments.

Arklam Countertops is a material with a high resistance to shocks, scratches, heat and chemicals. But it is always important to take care of the material, protecting it as much as possible as you would any other type of countertop.

Para un mantenimiento óptimo de Arklam Countertops, se recomienda una limpieza habitual con un **pañó húmedo con agua y jabón**. Además, es recomendable limpiar las manchas en el momento en el que se producen y no dejar que se sequen. En caso de que la mancha no sea reciente y se haya incrustado, hay que poner agua tibia con jabón durante unos minutos para que la suciedad se ablande y después retirar con un paño húmedo.

En cuanto al material empleado para retirar las manchas, se recomienda que sean **paños suaves y estropajos azules anti-rayaduras**. Cuanto más respetuoso sea el material utilizado para limpiar, mejor será el mantenimiento de la encimera.

Se deben evitar en todo momento productos abrasivos o lejías. En el caso de utilizar esta última, se deberá rebajar con agua y no dejar actuar durante mucho rato sobre la superficie Arklam. Es importante prestar especial atención al acabado pulido puesto que es más sensible a los productos abrasivos que otros acabados.

Aunque la masa sinterizada de Arklam es resistente al fuego y al calor, **siempre que sea posible se utilizará un protector para apoyar las ollas o sartenes calientes**. También es importante el uso de tablas de cortar para evitar en la medida de lo posible los cortes y los golpes sobre la encimera, sobretodo en el caso de utilizar cuchillos e instrumentos de cerámica.

Arklam Countertops es un material con una alta resistencia a los golpes, al rayado, al calor y a los químicos. Pero siempre es importante cuidar el material, protegiéndolo lo máximo posible igual que se haría con cualquier otro tipo de encimera.
